**EMI Shielding
Gaskets
with Conductive
Adhesive Backings**

Philadelphia, PA -- **Stockwell Rubber Company** announces the availability of **electrically conductive silicone rubber gaskets** and **cushioning pads with electrically conductive pressure sensitive acrylic adhesives for EMI shielding applications.**

Secure lamination of acrylic pressure sensitive adhesives onto silicone rubber is not possible without priming the silicone rubber. **Stockwell has developed a proprietary low viscosity primer that allows for lamination of 3M Corporations' #9713 conductive fabric supported acrylic adhesive and Venture Tapes' #1692**

conductive particle filled acrylic adhesive onto conductive silicone rubber and oriented wire filled silicone gasketing materials.

Rogers' EC2130 and EC2040 nickel-graphite filled silicone rubber is a compressible **30 and 40 durometer conductive gasketing material**. Application of **3M #9713 conductive fabric supported acrylic adhesive** provides **both a conductive adhesive surface for EMI shielding integrity and dimensional** stability to reduce tears during handling and assembly.

Stockwell's SNE555 nickel-graphite filled silicone rubber, SGE565 silver plated glass filled silicone rubber and SSE586 silver plated aluminum filled silicone rubber have also been supplied **with conductive acrylic adhesives**.

For 1" x 2" samples of **EC2130 with #9713 conductive acrylic adhesive** or **SSE586 with #9713 conductive acrylic adhesive**, complete information on the company's offerings in other silicone rubber products, and molding and fabrication capabilities, contact: **William B. Stockwell, wstockwell@stockwellrubber.com**
