Quality Management System Approved to ISO9001-2000

August 15, 2003 Philadelphia, Pa. - Stockwell Rubber Company, Inc. announces the approval of their Quality Management System to ISO9001-2000 by National Quality Assurance, USA. The company was previously certified to ISO9002-1994 and completed the transition to the ISO9001-2000 standard in June 2003.

Stockwell Rubber's core business is providing custom fabrication, die cutting, water jet cutting and molding of silicone rubber and similar high performance elastomers for the high technology sector; including analytical instrumentation, medical diagnostic equipment and information technology equipment. These components are most often specified to meet requirements such as environmental and fluid sealing, cushioning over temperature extremes, thermal management and special ESD (electro-static discharge) and EMI (electro-magnetic interference) shielding in high technology OEM equipment designs.

Stockwell's in-house capabilities include application of adhesive backing, die cutting, compression and injection molding (LIM), water jet cutting and custom fabrication capabilities. The company maintains a broad variety of solid silicone and silicone sponge, also Poron® cellular urethane, neoprene, and EPDM sponges and 3M VHB adhesives. Stockwell is renowned for its design support, prototype and fast-turn initial production capabilities.

The company competes in the global economy by employing Lean Business practices to reduce set up costs. This provides unit cost reductions in shorter production runs and reduces lead time – two critical elements of any manufacturer’s value proposition.
